An all welded pig iron carrier mixer of 200 ton capacity has been developed by the Ural Machine Building Works. This mixer carrier is designed for transport of molten pig iron from the blast furnace to open hearth. Tests are reputed to have shown that molten pig iron can be transported for distances up to ten to twelve miles with the metal kept in the molten state enroute without appreciable temperature loss. The body of the new carrier mixer is all welded construction and lined with fire brick.
